

LASER
VISTA

“Being able to see clearly when I get up in the morning...”

Sandra Flury, Manager's Assistant

I had very dry eyes from always wearing contact lenses and this bothered me. As I do a lot of exercise, I didn't want to wear glasses as this wouldn't have been practical. Comfort also plays an important role, of course. My optician kept advising me to have laser eye treatment. I had heard lots of good reports about LASER VISTA and was able to find out lots of information for myself during an information evening. After the extensive preliminary examination I decided on the treatment. I received expert, professional support and advice.

I am delighted with the result. I still remember waking up the day after the operation and being able to see clearly – words cannot describe the feeling. It really increases your quality of life.

I wake up in the morning and can see clearly! It really is an incredible feeling that anyone who doesn't wear glasses or lenses probably won't be able to really understand. It really is fair to say that the operation increases your quality of life.

I would definitely have the operation again. The treatment is so quick and afterwards you can enjoy a completely new attitude towards life.
